SUMMARY

Associate AI Engineer with production experience building multi-agent LLM systems on Microsoft Azure. At Betabridge, built and shipped ImpleAI — a multi-agent platform whose Flow, Test Case, Training, Gantt, and Support agents automate Dynamics 365 F&O consulting workflows — and delivered AI analytics bots for enterprise clients Orkla and ABB. Full-stack across agent orchestration, RAG pipelines and evals, FastAPI microservices, and Docker CI/CD on Azure.

SKILLS

AI Engineering: Multi-agent orchestration, RAG, LLM integration, LLM evaluation, agentic workflows, prompt engineering, MCP

Frameworks & Models: LangChain, LangGraph, AutoGen, CrewAI, Azure AI Foundry, OpenAI, Gemini, Claude

Languages: Python, JavaScript

Backend & APIs: FastAPI, REST APIs, Node.js, WebSockets, JWT / OAuth2

Cloud & DevOps: Microsoft Azure (App Services, Functions, Container Apps, ACR, Cognitive Search, SQL, Blob, API Management, Entra ID / AD B2C), Azure DevOps, Power Automate, GitHub Actions, Docker, Git, CI/CD

Databases: Azure SQL, Cosmos DB, MySQL, PostgreSQL, MongoDB

Frontend: React, Next.js, Tailwind CSS, Bootstrap, HTML/CSS

PROFESSIONAL EXPERIENCE

[Acumant Technology](#) / [Betabridge Ventures](#)

Noida, India

Associate AI Engineer

September 2024 – Present

[ImpleAI](#) — Multi-Agent AI Platform

- Shipped a **5-agent AI platform** — Flow, Test Case, Training, Gantt, and Support — where each agent owns a distinct stage of the **Dynamics 365 F&O** automation pipeline; now finalized as a product and running in active client demos.
- Architected a **modular orchestration layer** across all 5 agents so any agent can be added, reconfigured, or swapped independently, containing a logic change to 1 agent instead of the full pipeline.
- Engineered the Flow agent to convert SOP documents into consulting-grade process diagrams; benchmarked its output against an OpenAI image model across **25 quality criteria** and landed the code-level fixes that closed the largest gaps.
- Grounded the Support agent in the D365 F&O codebase with a **RAG pipeline** and a structured **evaluation harness**, tracing hallucination failures to incomplete indexing and enforcing grounding contracts on every response.
- Deployed **foundry-auth-proxy** — FastAPI on **Azure Container Apps** with ACR-versioned images — replacing an opaque isolation key with **JWT** user auth across a 3-app **Entra ID** architecture, and automated **Jira** ticket creation for unresolved queries.
- Scoped agentic **test automation** for D365 F&O workflows across an 8-phase roadmap, delivering the foundation phases that generate and execute test cases end-to-end.

Orkla AI Release Bot — Release Analytics

- Developed an **AI release bot** that resolves release queries end-to-end by unifying **3 data sources**: the release calendar, per-release **SharePoint** documents indexed on Azure, and live **Azure DevOps** test plans and suites.
- Replaced manual release-health reporting with auto-generated **KPI charts** embedded in existing dashboards, giving engineering and product teams release visibility without a reporting cycle.
- Closed the loop with an escalation path that auto-files a ticket for any query the bot cannot answer, so **0 requests** are dropped.

RAG Chart Bot — ABB

- Implemented a **Retrieval-Augmented Generation (RAG)** pipeline for ABB's business analytics: piped source data through **Power Automate** flows and indexed cluttered, complex datasets in **Azure Cognitive Search** to ground every chart query in real data.
- Integrated retrieval, **embeddings**, and LLM generation behind a single service, letting business users query analytics in natural language and receive chart-backed answers.

[BetaHub Process Screen Recorder](#) — Chrome Extension

- Created a **Chrome extension** that captures user workflows step-by-step into clean, shareable files — no manual editing — used for training, debugging, and process documentation across teams.

PERSONAL PROJECTS

- LLM Watchtower** — Prototyped an AI-observability POC that monitors production LLM applications across 4 risk dimensions: hallucination, toxicity, PII exposure, and policy compliance.
- Credit Card Fraud Detection** — Trained a Random Forest classifier on a 284K-transaction Kaggle dataset in which fraud accounts for under 0.2% of records, tuning for recall on the minority class.

EDUCATION

Galgotias University, Greater Noida — B.Tech, Computer Science | CGPA 9.17 / 10

2020 – 2024

CERTIFICATIONS & AWARDS

- [Shining Star](#) — AI Award, Acumant (earned within first year of professional experience)
- [Claude Code in Action](#) — Anthropic (2026) | AWS Academy — ML, Data Analytics, Cloud Foundations
